

Company introduction

60 years of screws and furniture fittings made in Italy

Cold Forging History

- **M**auri was founded in 1953 by Mr. Gaetano Mauri, as a manufacturer of turning part from wire rod, since 1978 we have focused our experience and capacity in cold forging technology.
- **M**auri company is owned and managed by Family Mauri and our vision are shared with our 75 co-workers that we consider part of our family to protect and to help to increase professionalism.

" Our mission is create, not just to produce " Luca Mauri - CEO.

Made in Italy Production

Plant of production:

- ❑ 5.500 mq
- ❑ 55 Sets of cold forging machine from 1D2B to 7D7B
- ❑ 40 Sets of secondary operation machine
- ❑ 3 Sets of packing machine

Logistical plant:

- ❑ 4.500 sqm
- ❑ 3.500 pallets place
- ❑ 2.000 tank place

Cold wire deformation Technology

The Process:

- ❑ Save material
- ❑ Quick output rate
- ❑ Accurate tolerances
- ❑ Repeateble batches

Cold wire deformation is a young and growing technology that offers a great numbers of advantages compared to the traditional turning technology.

First and foremost it save materials by deforming one piece instead of cutting the material away, then it improves the output rate, the accuracy of a few tolerances and the repetability of batches.

Mauri can design and manufacture special parts using the cold tecnology.

How cold forging can reduce cost?

Advantages of Cold Forming:

- ❑ Design Versatility
- ❑ Metallurgical Effects
- ❑ Improves strength and hardness

- ❑ The main cost driver for fittings manufacturer is raw material, in recent period we have found a lot of speculation coming up even in steel market, that's why we have concentrate our mission in reducing raw material need without damage mechanical features.
- ❑ The hollow forging method can be one way to reduce weight/cost and assure a CEPQ fully respected.
- ❑ Purpose of use is another way to calibrate the right fittings for the right application in order to standardize different size and code.

Development and Innovation: Our Power

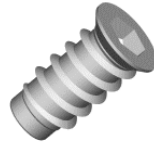

- 15 people of 75 employed at Mauri work in research and development.
- Every year we manufacture at least of range of new machines for our production area.
- Every month, we manufacture equipment for approximately 3/5 new articles.

Mauri Product_ web catalogue www.mauri-fm.eu

We have taken few example from our online catalogue.

- Fasteners
- Allen Keys
- Top connector
- Adjustable feet

Main Customer

- Co-operation
- Collaboration
- Competence

*“ When the conditions are right, when the numbers justify investments in machineries and dies so as to redeem the cost, that is when technology can evolve:
New products , new ideas come up. ”*

Luca Mauri - CEO
